

Saige Prostate

Streamline the interpretation
of prostate MRI.

FDA cleared | CE marked

Improve your interpretation of prostate MRI.

Saige Prostate (formerly Quantib® Prostate) delivers:

- Editable prostate gland segmentation and automated subregion segmentations powered by deep-learning.
- Integrated calculation of the PSA density.
- User interface with a customizable hanging layout that allows you to select the desired series through a drop-down menu.
- Biparametric combination overlay that facilitates one-click segmentation of suspicious regions of interest.
- Visual PI-RADS v.2.1 scoring support, including kinetic curve representations of the full prostate gland and each lesion* as well as the automatic drawing of each lesion* in the PI-RADS sector map.

Add value to the prostate cancer diagnostic pathway.

Saige Prostate outputs:

- A standardized and complete visual report that can serve as input for your radiology report and can be shared directly with the referring physician to support your findings.
- 3D exports of prostate gland, subregion, and lesion* segmentations that can be easily imported into compatible ultrasound systems.**

Accelerate your workflow with AI.

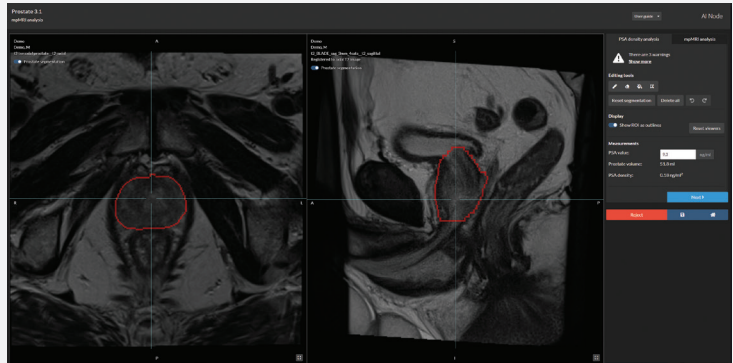

Saige Prostate is:

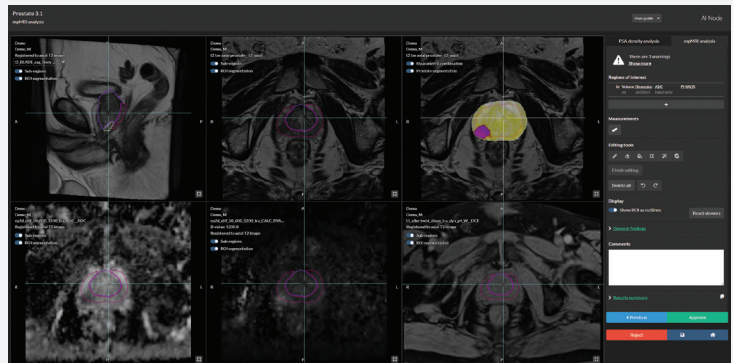

- A one-stop software for prostate MRI reading.
- Browser-based and can be installed on site or in the cloud.
- Easily integrated with PACS and other systems.

An intuitive user interface guides you through all the steps of the prostate MRI reading workflow.

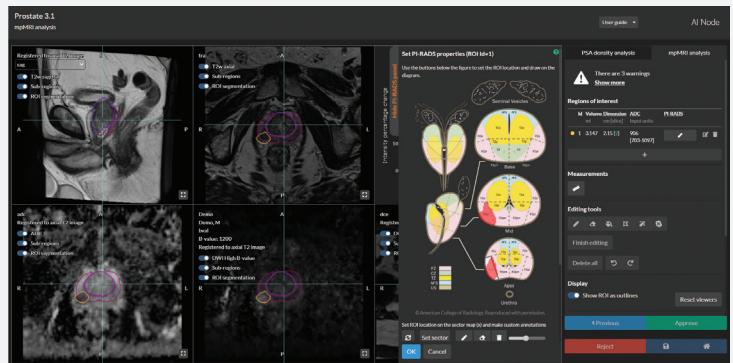

1 PSA density analysis step

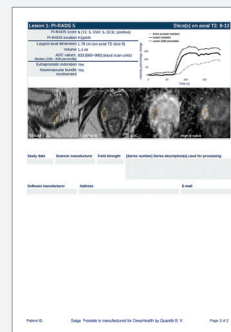

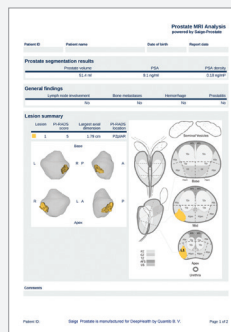

2 mp-PSA analysis step

3 PI-RADS scoring support
